Dear Editor-in-Chief

Here we mention our responses to these valuable comments of M. Mahmoudimanesh.

- 1) We are sorry for the intendent use of Turkish syntax in paper. The maximum value of CO in 2003 is 3693 and its correct presentation is 3693.
- 2.) She may be right but this study should not be evaluated in biostatistics nor epidemiological aspects. It was is a descriptive study that we neither

observed the epidemiological patterns of Asian and European sides of Istanbul nor we used advanced statistical techniques in order to forecast any outcomes depending on individual observations.

Best

Eray YURTSEVEN
